Introduction:

Global Child Behavioral Health Fellowship Program

It is critical to support, mentor, and help cultivate a group of talented emerging scholars – particularly those whose interest is in working in Africa, the poorest and youngest continent, with over half the population between ages 5-24 years. With these socio-demographic trends, the focus should be on supporting emerging committed scholars with the potential to become leaders in child and adolescent behavioral health research in the region. Hence, the SMART Africa Center is dedicated to providing leadership opportunities for a cadre of young scientists (doctoral and postdoctoral candidates and assistant professors) committed to social and behavioral research in Sub-Saharan Africa (SSA). The Global Child Health Fellowship Program (hereafter *Global Fellows Program*), established by the SMART Africa Center, ensures that the most dedicated and talented new investigators are able to benefit from mentoring relationships with renowned researchers who have an established research portfolio in SSA.

Scholars are identified based on their potential to lead the next generation of child and adolescent behavioral health research in the region, and they are mentored through both formal and informal mechanisms by a network of committed and active senior mentors. Currently, the program has nine global fellows, representing eight countries, five of which are in SSA (Ethiopia, Ghana, Kenya, Nigeria, and Uganda). Other countries represented include: Turkey and United States.

The goals of Global Fellows Program are to: 1) Provide training and support to selected global fellows through connection to senior investigators working on child and adolescent behavioral health research in SSA; 2) Establish a research and training pipeline that fosters long-term collaborations (including those focused on research, practice and policy); 3) Facilitate and enhance multidisciplinary learning opportunities; and 4) Provide administrative and technical assistance to selected global fellows.

Relatedly, as part of the Global Fellows program, the selected fellows and senior mentors co-author presentations and papers as well as collaborate on research and grant writing opportunities. Overall, this approach bolsters contextually and culturally congruent, theory-driven child and adolescent behavioral health intervention research in SSA. Moreover, in addition to the benefits to the child and adolescent behavioral health field, the approach brings interest, authenticity, and long-term commitment to the child and behavioral field through a strategic mentorship approach.

This report provides Global Fellows' accomplishments in the fourth year of the Global fellow program (June 2018 - May 2019). Overall, SMART Africa Global Fellows contributed to the publication of over 60 peer-reviewed publications and made over 33 conference presentations. This is in addition to over 20 submitted extramural grant applications as PIs or Co-Is, thirteen of which have been funded (9 by NIH). Other accomplishments include taking up academic positions and achieving critical milestones in their respective fields.

We invite you to visit our website at <https://sites.wustl.edu/smartafrica/global-child-health-fellowship-program/> to learn more about the fellowship program and access the full CVs of our Global Fellows. Please join the SMART Africa leadership team in congratulating them and their mentors on such a productive third year and wishing each one of them even greater success in their fourth year of the fellowship.

SMART Africa Leadership Team

Laura Gauer Bermudez, PhD

Director of Evidence & Learning, The Global Fund to End Modern Slavery
